Reasons

Why You Need The VIGILANT CTA Ceiling Tile Adaptor - “Time-Saver Mount”

1. Save Time. Save Money

You don't need to wait until the suspended ceiling is installed. With the Ceiling Tile Adaptor you can install and commission the detector right now. Once the ceiling is installed, the detector and base simply snap-fit into position. Job done.

2. Installation Time Reduced by up to 30%

When used with suspended ceilings, the Ceiling Tile Adaptor can save up to 30% on installation time. So you can move on to the next job sooner.

3. Easy Access

The clever design of the Ceiling Tile Adaptor allows easy access to the detector for both the alarm installer and the alarm commissioning technician, without disrupting the installation of the suspended ceiling. Less disruption on site.

4. Delivers Effective Life-Safety

Until now, the detector wiring would be done first, with long tails. After the ceiling is installed, the detector base would be fixed to the ceiling with screws and terminated, then the detector is fitted to the base. Finally the alarm system can be commissioned.

Your alarm technicians have had to make at least two visits to the ceiling, possibly more.

Two chances for a fall from a ladder or platform at height.

Not any more.

With the Ceiling Tile Adaptor, alarm technicians need to make only one visit to the ceiling.

5. Cost Effective

The Ceiling Tile Adaptor helps all contractors on site. Your ceiling installer only has to make one visit to site. Your alarm installer only has to visit site once.
