## INTRODUCTION

The FP1600 Fire Alarm System is expandable from 16 to 96 zones and is available in both front service (F/S) and rear service (R/S) cabinet versions.

Systems are built up from multiple small format cabinets with a capacity of 16 zones each. Larger systems are built up by ordering and fitting additional parts as required. The parts to order for various size systems are listed and illustrated in this publication.

OMEGA 64 is the historical designation of the FP1600 in expanded 32-96 zone configuration. Larger format cabinets (32 zone) are no longer available.

## IMPORTANT NOTES

### 1. Use correct installation instructions

FP1600 systems must be assembled, installed, wired and programmed correctly to ensure safe and reliable operation. Do not attempt to install or program a system without reference to the manufacturer's instructions. Refer to the FP1600 Technical Manual (Part Number LT0196) for the correct assembly and installation information.

### 2. Thermal cutout for batteries wired in parallel

Where batteries are wired in parallel to obtain larger capacity, the installation instructions require a protective thermal cutout to be installed in series with each battery.

The ordering code for the thermal cutout is: SU0159 Thermal Cutout 10A, Type D. One cutout is required for each battery.
